INFORMATION**

TUF DEK

## **TUF DEK WORKS HARDER**

With a 30+ year reputation of providing the ultimate pickup tray protection the name "Tuf Dek" is synonymous with all utility deck liners.

Tuf Dek Liners provide all-round protection; the liner includes a separate cover for the inside of the tailgate.

## BUILT TOUGH, BUILT TO LAST

When you protect your pickup tray from scratches and dents with a genuine Tuf Dek liner you're not only protecting your investment by increasing the lifespan of the vehicle and improving the resale value, but you're also enhancing your vehicles street appeal!

### Genuine Tuf Dek Liners are:

- Virtually impossible to crack or break.
- Styled to enhance your vehicles look.
- Moulded to the exact shape of your vehicle's pickup tray to maximise load space.
- Resistant to sunlight and everyday chemicals.
- Manufactured from high density polyethylene for hard wearing protection.
- The only liner built to fit a Tuf Lok load partitioning system.

## OVER-RAIL TUF DEK BED LINERS

Tuf Dek over-rail liners are designed to provide protection for the top edge rail of the pickup tray. They are best suited for applications where the top edge of the pickup tray is fully exposed and needs protecting against marks and scratches, particularly during the loading and unloading of heavy objects.

## UNDER-RAIL TUF DEK BED LINERS

Tuf Dek under rail liners are custom moulded to fit snugly under the top rail of the pickup tray.

They are particularly suited for applications where the top edge of the pickup tray is covered by fitted accessory products, including tonneau covers and hard lids.

## THE ADDITIONAL OPTIONS AVAILABLE

Custom logo programmes are available, branding can be customised to your requirements

Tuf Dek liners can be trimmed for vehicles with or without factory headboards and an insert can be added to adapt for the factory headboard where required.

## MANUFACTURING

Our manufacturing facility is located on a four acre site in Hamilton New Zealand, where we utilise modern, large scale, automated production machinery.

Our highly trained production personnel are complimented by design specialists and experienced research and development personnel utilising state of the art technology.

Automated 5-axis trimming ensures repeatable, accurate and consistent quality production.

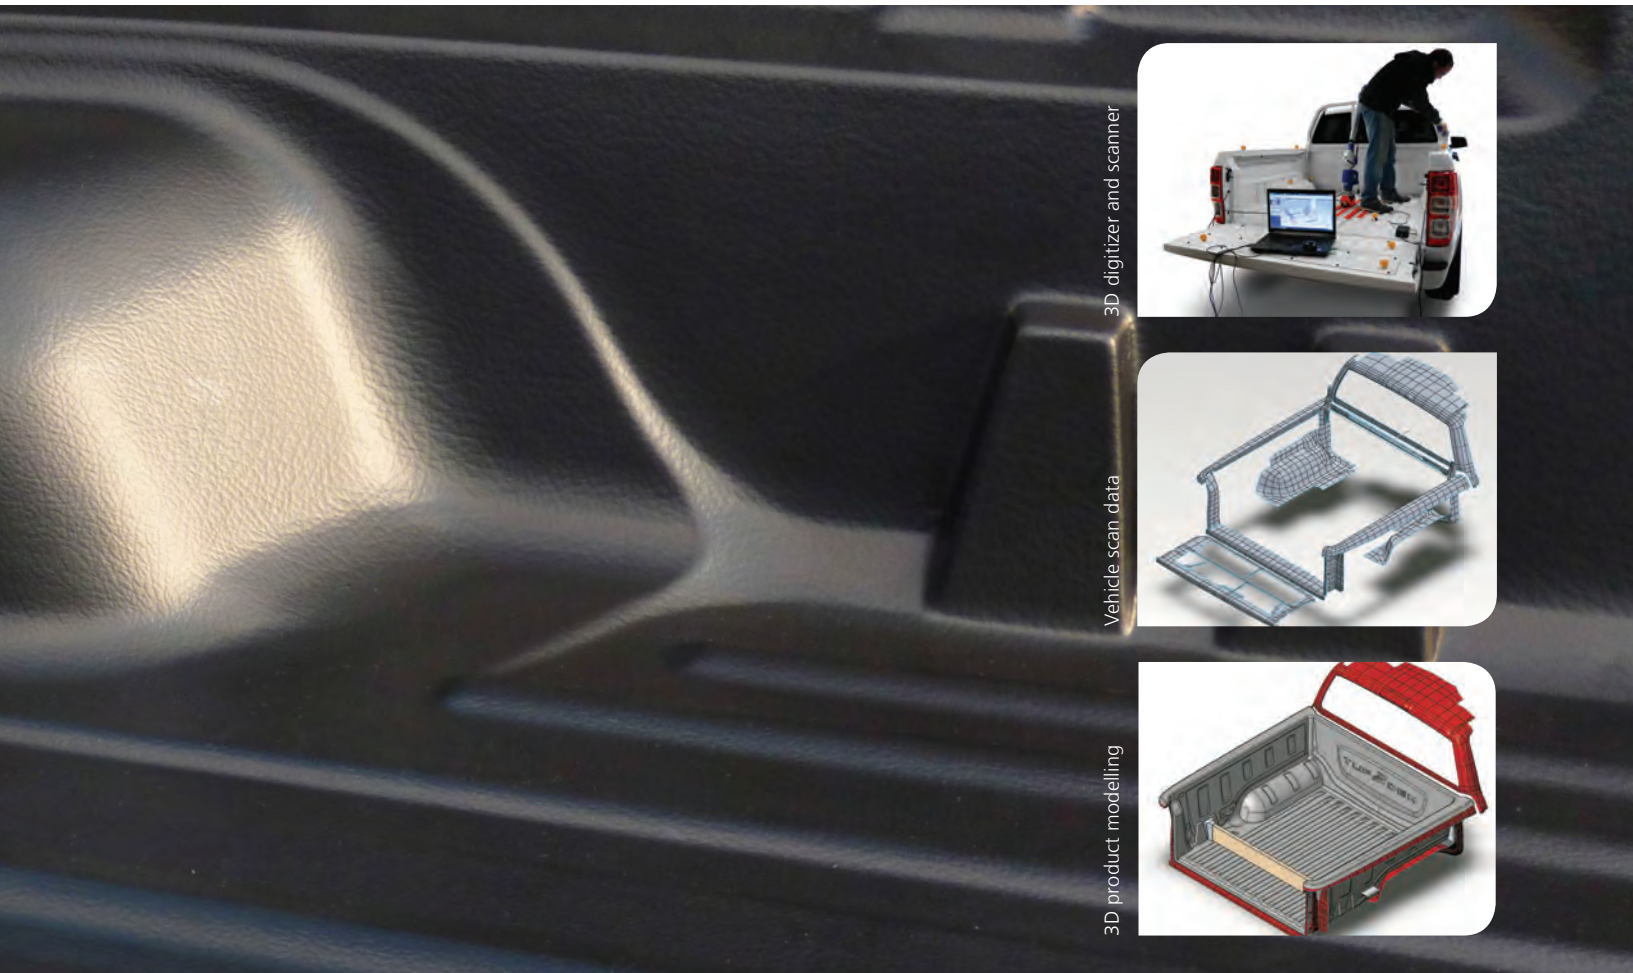

## INVESTMENT

To ensure that we are always at the forefront of both production and design technology, we are continually investing in two key areas:

**Technology:** state-of-the art infrared automated thermoforming equipment. A highly experienced design team using the latest 3D scanning & digitising technology. Solidworks and Geomagic are our software platforms of choice in which we continue to evolve, always testing our innovative designs.

**Information systems:** this ensures us a flexible development process that can be rapidly tailored to suit changing market dynamics.
